

ROLLING CABINETS

MC-CAB

The MC-CAB Rolling Cabinet is an optional add-on designed to enhance mobility, storage, and security for any Marcraft paneled product. This lockable rolling cabinet mounts directly beneath compatible panels, creating a fully transportable workstation while providing secure storage for equipment, tools, and instructional materials.

Built with durability and classroom use in mind, the MC-CAB features locking casters that allow the entire panel system to be easily moved and firmly secured in place during use. A pair of rear cutouts is included to allow for clean integration of an internal power supply when required. Optional interior shelving is available upon request, allowing the cabinet to be configured to meet specific storage needs.

An integrated gap between the cabinet and the panel provides a convenient work surface for students, maximizing usability without increasing the overall footprint. The MC-CAB is an ideal solution for labs and classrooms that require flexibility, organization, and secure storage in one streamlined system.

Features:

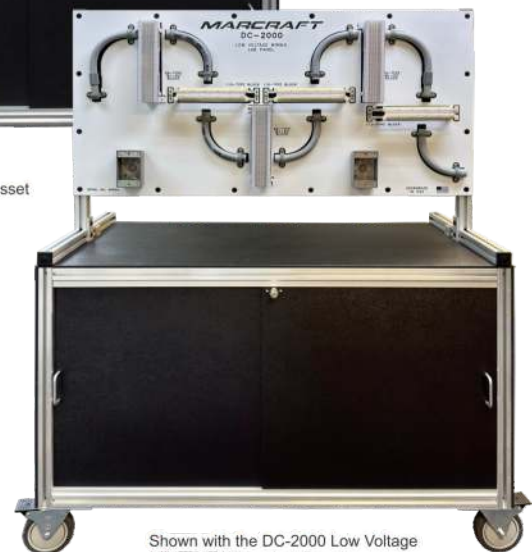

- Locking Cabinet
- Locking Casters
- Rear Cutouts for Cables
- Optional Shelving
